

# paloalto Traps: Next Generation Anti Virus NETWORKS

Traditional AV is no longer the solution; it's the problem. Palo Alto Networks offers protection from both known and unknown threats; whereas traditional AV leaves you exposed to infection including from Ransomware and Cryptolocker.

**Replace your legacy AV solution with Next Generation Palo Alto Traps**

## Key Features

- ⇒ No Virus Signatures
- ⇒ Gartner Leader in Security
- ⇒ Replaces your AV
- ⇒ Fully managed service
- ⇒ No upfront capital cost
- ⇒ From £3 per endpoint per month

## Service Description

Traditional AV is no longer effective at stopping today's cyberattacks. In fact, to prevent security breaches in your organisation, you must protect yourself not only from known and unknown threats but also from the failures of any traditional AV solutions deployed in your environment. It's time to replace your traditional antivirus solution with a real breach prevention tool.

Traps uses multiple methods of prevention. Traps checks everything that is run on an endpoint against a whitelist in the cloud called Wildfire. When Traps encounters code it hasn't seen it detonates that code in Wildfire and either denies it if it is deemed a threat or adds it to the whitelist going forward. That whitelist is shared with all customers amounting to a huge repository used by all Traps installations.

## Why choose Consilium UK Ltd & Palo Alto Networks to provide this service?

**Consilium is the only company in the UK delivering Traps as a fully managed service. Palo Alto Networks is a leading enterprise provider of security solutions and a recognised Gartner Leader for the last five years consecutively. They are at the absolute cutting edge of endpoint protection.**

Simply put we don't believe that organisations can afford not to act. Below is a small sample of some of the high profile infections that have made the news. In most instances the organisations had AV.
